

M-18 Counterfeit Detector

Intense UV Illumination for Counterfeit Detection

The M-18 counterfeit detector uses powerful UV illumination to make the security thread visible on even the most worn or faded bills.

■ I.D. and Credit Card Verification

The high-intensity UV lamp of the M18 counterfeit detector brightly illuminates UV-reflective marks on ID cards, passports and credit cards.

■ Universal Compatibility

Also works with Canadian dollars, Pesos and Euros. Fully compatible with the upcoming new series of \$100 US bills. Visit: www.newmoney.gov for additional information.

■ Watermark Detection

Check watermarks at the same time with the backlight built into the inspection platform. Both UV and watermark lamps can be on at the same time for quick authentication.

■ Smart Design

The M-18 requires less desk space than most other UV detectors with a base measuring only 7.3"x 4.7". Industrial strength velcro set allows for quick and easy attachment to wall or desktop location.
